48"	20'	\$1199.99

- A.D.S N-12® Dual Wall, Corrugated, smooth interior, high-density polyethylene (HDPE) pipe
- Introduced in 1987, dual wall N-12 pipe, with its smooth interior wall and corrugated exterior, offers exceptional hydraulics and strength. Built using application-specific high-density polyethylene, dual wall N-12 corrugated pipe also provides superior corrosion and abrasion resistance. This makes it an excellent alternative to reinforced concrete (RCP) and corrugated metal pipe (CMP).
- Pipes can be connected together with no additional parts
- We do not cut culverts
- Galvanized metal sloped ends may be attached to poly culverts using a coupling band.
